Chorong

Furniture and Product Design BA(Hons)

ntu
design
industries

Chorong, designed in collaboration with Majis, is a portable lighting inspired by traditional Korean aesthetics. Drawing influence from the Cheongsachorong, a traditional Korean lantern, Chorong is designed to be both versatile and customisable. It can be hung or carried with ease, and its adjustable light colours allow users to tailor the ambience to suit their environment. Crafted exclusively from paper and bamboo, the design embodies the elegance and heritage of East Asian traditions. Suitable for indoor use.

Hanabi (花火)

Furniture and Product Design BA(Hons)

ntu
design
industries

Hanabi is a range of generational lighting products designed for a project collaborating with Magis. The concept of Hanabi was inspired by fireworks, that aims to create an enjoyable experience of people interacting with light by stretching the paper lamp shell to change the light quality with the knob. Hanabi is functional, joyful, sustainable and simple, enabling the appreciation of natural light and materials, through using origami with washi paper to celebrate Japanese traditional craftsmanship; the aim is to spread this message of embracing environmental principles in design to the next generation.

Curated Collectables

Product Design BA(Hons)

ntu
design
industries

The **Curated Collectables Travel Package** was designed to counter the 'Airbnb Effect'—the criticism that Airbnb contributes to housing shortages and over-tourism. This product promotes mindful travel by encouraging users to rediscover their hometown. Book a tour through Airbnb and receive a beautifully designed package with two cartons. The outer carton reveals a hometown-inspired design and nine cavities for mementos, each with NFC tags to earn rewards on the Airbnb app. The carton transforms into a display stand, offering a sustainable way to explore locally.

Jonty Haddon

Flex

Furniture and Product Design BA (Hons)

ntu
design
industries

Flex was designed for Allermuir, as a café bar stool. Research concluded that a huge majority of people in cafés use screens, a behavior which is becoming ever more common as we move to a more digital world. This excessive use of screens takes a toll on our bodies, and back pain is reportedly worse than it has ever been. The Flex stool is designed to tackle this issue; the 10° tilt repositions the user optimally for screen use at bar height when needed, providing lumbar support by activating the core muscles. The stool's dynamic design offers the user diverse seating positions, suitable for the spontaneous environment of modern offices. The tube steel frame and upholstered seat come in a range of popping powder coat and fabric colours.

Precipice Lamp

Product Design BA(Hons)

ntu
design
industries

Designed for John Lewis, the Precipice Lamp answers the call of the retro-replay trend, utilising nostalgic colour palettes, shapes and materials to create a singularly elegant design. The entire body can be manufactured in one step utilising aero-ply bending technology, minimising production cost and enhancing structural integrity. The lamp plays with a feeling of tension, designed to not quite look stable, but a large steel weight in the base keeps the lamp sturdy and safe for the home. The polycarbonate bulb is entirely removable, and has a wireless battery life of 8 hours. The light is dimmable, and the temperature adjustable via app control.

Tesco Gunpowder-free Crackers

Product Design BA(Hons)

ntu
design
industries

Christmas crackers are a major contributor to festive waste, largely due to cheap plastic toys and gunpowder-coated strips that produce the snap. Tesco's gunpowder-free crackers take a sustainable approach to this holiday staple, replacing the traditional snap with a fully paper-based mechanism powered by an elastic band, which not only produces a satisfying snapping sound but also doubles as a toy! The included games creatively reuse the cracker's outer shell, turning it into components for collaborative and competitive activities. This redesign reduces waste while offering a more engaging and connected festive experience.

Miles Hardy

Mr U (Useful)

Furniture & Product Design BA(Hons)

ntu
design
industries

Mr U is a product created in collaboration with the Benchmark brand, with the aim of creating a simple, small and useful piece of furniture. Inspired by a chair used in my childhood home, I decided to create an infinitely useful stool, designed to meet whatever requirements each household has. The product is designed sustainably, without any glue, allowing the stool to be easily repaired by either the user or Benchmark, using their existing repair & refurbish service. Using cord is the alternative to glue; tensioning the angled legs with the cord, creates a locked leg system that makes the stool structurally sound, and is easy to assemble and disassemble.

Komorebi: Home Lamp

Product Design BSc(Hons)

ntu
design
industries

Introducing the Komorebi: Home Lamp—a sophisticated lighting solution that provides warm, ambient illumination to light up your entire room. The detachable smaller lamp is perfect for a child working on a puzzle or a father reading a book and can also be used as an emergency light during power cuts. Designed to blend seamlessly into modern and timeless décor, it's ideal for a busy family with young children. With removable, rechargeable secondary lamps that can be carried around the house, 360-degree swiveling arms, and dimmable lighting controlled via a sleek leather ring, this lamp offers unparalleled flexibility and convenience for every household need.

Harry Waller

Orbis

Product Design BA(Hons)

ntu
design
industries

Orbis is a kitchen task lamp that utilises magnetic connection to maximise adjustability. There are 3 points of adjustability situated on the product including: a twisting motion on the standing beam; a screw adjustment on the horizontal beam and the magnetic sphere on the shade. These points of adjustment allow for a 360 degree rotation to increase the efficiency of any kitchen task. The product is able to be entirely disassembled, as shown, to allow for the user to remove and clean the separate parts when necessary. The subtle but functional insert on the base further increases kitchen efficiency allowing for recipe books or tablets to lean against the beam.

© Luke Johnson 2025

© Luke Johnson 2025

© Luke Johnson 2025

LightCycle is a mood lamp designed using upcycled bicycle parts to help combat issues of over consumerism of bicycles across the world. The lampshade is made up of two large diffuse panels that project light off of the top metal surface. The dials on each side of the lampshade allow the position to be adjusted to change the mood and direction of this light. These parts can be fully unscrewed, allowing the lampshade to be removed freely for ease of packaging and transporting the product. Keeping with the original bike aesthetics, the original powder coat has been reapplied to the components to remove any wear and scratches seen on an old bicycle.

Reverie

Product Design BSc(Hons)

ntu
design
industries

Reverie is a high-end addition to any home, especially for those looking to create a soothing environment. The organic design and use of natural materials like hammered copper and blown crystal glass reflect elements of quiet luxury. Trends like these inspired by nature continue to gain popularity. This product perfectly captures the essence of water reflections, creating a calming ambiance around the user. The idea of using graceful, curvaceous shapes and arch structures in home decor brings a harmonious and relaxing aesthetic. For those working from home, having this piece could indeed be beneficial in helping to create a distinct separation between work time and relaxation time.

industries

Seasonal affective disorder (SAD) affects around one in 20 of us in the UK. One effective method of treatment is the use of an SAD therapy lamp. Unfortunately, current devices are often found to be lacking when it comes to: aesthetic appeal, feature-set or effectiveness (often a combination of all three).

Introducing Solace - a complete light and circadian rhythm therapy solution, designed to brighten winter days for everyone and deliver clinical-grade effectiveness for those with Seasonal Affective Disorder. Unlike current offerings in the market, Solace offers both a plentiful feature set, and medical-grade light therapy for those with SAD.

Experiencebnb

Product Design BA(Hons)

ntu
design
industries

Welcome to Experiencebnb! A welcome package designed to help travellers understand more about where they are staying, through information provided by previous guests. Only a select few Airbnb properties contain a guest book, and they are only there to provide feedback to the host. Experiencebnb aims to switch that focus onto the guest, what feedback can they provide to help guests in the future? Each new guest will scan the QR code on the back to understand how to use the product. They can then write down notes on their experiences at that location and scrap book it into the categorised guest book. Future guests can then flick through and find potential activities and locations to go experience.

Muller Corner

Product Design BA(Hons)

ntu
design
industries

The Muller Corner Commercial Brief required a redesign of the classic packaging into a new, innovative Corner concept more relevant to the contemporary consumer. Through vast research and initial idea sketching I was led to the target market: On the go consumption. The Corner redesign is desirable mainly for busy consumers, for example commuters, through its compact shape and ease of use. The corner is opened by removing the tab and popping open the orb shape. Once the foil lid is removed (separating the topping from the yoghurt) the contents can be stirred, shaken or spooned into the base container achieving the mix of components desired by the consumer. The Muller ethos is not lost in this redesign since the Corner has remained playful and fun with its unique shape, packaging glimmers, sounds and the shake to mix option. Furthermore, the product is fully recyclable embodying Mullers sustainability goals for this year.

TESCO True Colour Collection

Product Design BA(Hons)

ntu
design
industries

The True Colour Collection is a cushion pride range that Tesco could introduce to help tackle the waste created by the commercialisation of Pride, highlighting their support of the LGBTQIA+ community. They can be interchanged throughout the year to match the season and Tesco's could explore this idea by bundling certain cushions together at a bundle price. Each one is made from cotton and has intricate embellishments through embroidery and beading which are inspired by queer artists. Lastly, the cushions are finished off with a custom tag, highlighting not only all the cushions in the collection, but also a Qr code to the artist's Instagram.

Lumimood

Product Design BSc(Hons)

ntu
design
industries

Lumimood is a multi-hybrid lighting system, which has been designed to utilise mood and task light to support a range of tasks. Most people rely on using one direct function in a standard system and usually require an alternative lighting system to provide different effects which directly links to emotion. Mood leans towards reduced stress and increased relaxation, whereas task focuses on increased visibility and concentration. Lumimood focuses towards these two attributes, giving the user time to focus on a desired task, and when they want to switch off from a focused light environment, they can easily switch to mood lighting via the button interface. Portability and moveability in this system, makes it easy to move around the commercial environment, with a control measure of a plug socket being in close proximity. 360° moveability, in this device, means the two lights can be focused upwards or downwards to the point of focus, for example, when a user needs to visually see an item/document. This has particularly been focused on work from home graduates with a bigger, wider market in mind in the commercial environment.

Half the Story Pop-Up Stand

Product Design BA(Hons)

ntu
design
industries

The Half the Story pop-up stand is a modularity-based stand with the primary function being to effectively communicate to the user the mission of the social enterprise. Intended for use at trade shows, the modular aspect of the design provides the client with almost infinite scalability, being suitable for a stand as small as 1m x 1m. This is as a result of the design's range of 9 standardised components, which can be set up in various different configurations depending on the client's needs. Manufactured from plywood and aluminium, the design, when disassembled, is light, durable and easy to transport.

Alpine Spire

Product Design BA(Hons)

ntu
design
industries

The Alpine Spire task light is designed to bring stability and permanence to work-from-home spaces. Its shape draws inspiration from the rugged strength of mountains. Crafted from slate, a material with ties to UK mountains, the lamp embodies durability and timeless appeal. The slate adds an organic, tactile quality while reflecting the resilience of natural landscapes. With aluminum included, the lamp merges functionality with symbolic elements, becoming more than a light—it's a grounding presence that enhances the workspace. Capturing nature's permanence, it offers both practicality and a timeless connection to the outdoors

design
industries

Introducing Polyteleia, lighting design that merges modern sophistication with tactile charm. This elegant fixture features three vertically aligned brass corrugated pillars, standing proudly on a base crafted from smoked cork. The contrast between the metallic sheen of the brass and the organic texture of the cork creates a visually stunning interplay of materials. Each pillar houses a warm-toned bulb, designed to fill the room with a soft, inviting glow. This thoughtfully designed light is a harmonious blend of artistry and practicality, designed to elevate any interior while creating a serene and welcoming atmosphere

'Hanoi' Table Lamp

Product Design BSc (Hons)

ntu
design
industries

The 'Hanoi' lamp is a unique and modular table lamp designed to give users more creative freedom in their homes. The current market for table lamps is very monotonous, so introducing something that not only allows users to customise it to their liking but also presents more creative lamp options would be valuable to the consumer. The customer is in control during each step of the process as they can select the various glass forms, textures and colours they want on the lamp. Each glass form comes with secure packaging so the user can store different pieces away for later use. The great thing about this product is that it can be tailored bespoke to suit almost any occasion or household.

Muller Corner - Collectable yoghurt packaging

Product Design BA(Hons)

ntu
design
industries

A playful design that encapsulates the happy-go-lucky character of a child. The top of the lid portrays a mascot in different poses - a collectable of sorts. The cartoon illustration was heavily inspired by Muller's historical origins in Bavaria, Germany, based on a mythical folklore, the "Wolpertinger".

The packaging holds both chocolate toppings and yoghurt in the same pot. The toppings are secured inside the pot's lid, and the yoghurt inside the pot. Slide the spoon with the triangular tip to release the toppings within the lid.

Wick

Product Design BSc(Hons)

ntu
design
industries

Leave behind the hassle of lighting short-lived candles with Wick, the ambient mood light that focuses on the user's wellbeing and comfort, whether you are enjoying a relaxing bath, getting cosy with a good book, or simply wish to enhance the ambiance of the room. Wick invokes the naturalistic aesthetic of candles and elevates it by giving the user control of brightness, colour, and mood, delivering a more calm and relaxing experience. Built to be waterproof, Wick gives the user peace of mind with its secure silicone base and easy use magnetic charging system. Users don't have to worry anymore about glass candles when de-stressing in the bath.

Muller Corner

Product Design BA(Hons)

ntu
design
industries

The Müller Corner—Lick Every Corner is a playful and innovative mono-material yogurt packaging that turns snacking into a fun, interactive experience. Shaped like a soft-edged pyramid, it features two compartments: a top pyramid for toppings and a trapezoidal base for yogurt, separated by a perforated divider. Pressing the top's perforated wall acts as a lever, releasing toppings with a satisfying "crack." Shake to mix, peel to savor, and enjoy the creamy blend. Two snap-fit side closures and a hinge at the back ensure secure resealing. Crack, shake, and lick your way to a snack that's perfect for any moment!

Aurelia

Product Design BA(Hons)

ntu
design
industries

Aurelia is an ambient lighting fixture that combines calming aesthetics with innovative design, entirely inspired by the gentle, fluid motion of a jellyfish. The name "Aurelia" itself is derived from the species of jellyfish. The use of chiffon fabric mimics the jellyfish's translucent, flowing form. The lamp features LED colour-changing lights that can be controlled via remote, offering a mesmerizing, life-like display as the soft, glowing jellyfish gently pulse and float. The stand is designed to evoke the jellyfish's tentacles and add a final touch of organic elegance, making it an ideal addition to any room needing relaxation, tranquillity or a unique, artistic accent.
